

SAMI CHAUHAN

samichauhan.vercel.app | chauhansam02@gmail.com | linkedin.com/in/schauhan2000 | github.com/scKamui

EDUCATION

Thompson Rivers University - Kamloops, B.C.

Bachelor of Science in Computer Science

EXPERIENCE

Rogers Communications - Sales Representative

Langley, BC | April 2022 - Present

- Sell mobility and residential services across consumer, corporate, and small-business accounts while staying current on changing promotions, pricing, products, and policies.
- Build customer relationships by identifying needs, recommending solutions, and resolving service or account issues.
- Collaborate with team members in a fast-paced environment to resolve customer needs, support daily store operations, and meet individual and store performance targets.

PROJECTS

CiteBack - Evidence-Grounded Academic Paper Assistant | [Live Demo](#) | [GitHub](#)

Python, Streamlit, Retrieval-Augmented Generation (RAG), Sentence Transformers, Groq API, pytest

- Built CiteBack, an evidence-first RAG application that helps students understand dense academic papers while keeping generated answers tied to supporting passages and PDF page numbers.
- Engineered a Python pipeline for page-aware PDF extraction, text cleaning, context-aware chunking, local embeddings, and NumPy similarity search.
- Generated grounded responses with Llama 3.3 through the Groq API, then validated cited pages and passages with a second verification pass and automated pytest coverage.

OfferTrail - Internship & Job Application Tracker | [GitHub](#)

PHP, MySQL, JavaScript, AJAX, HTML/CSS

- Built a full-stack web application that helps users organize job and internship applications, deadlines, and status updates through a centralized dashboard.
- Implemented session-based authentication, CRUD operations, AJAX updates, and parameterized SQL queries using PHP and MySQL.
- Developed a dynamic calendar with status-based indicators so users can quickly track application progress and upcoming deadlines.

Subject Zero - 2D Zombie Survival Game | [GitHub](#)

Phaser 3, JavaScript, HTML5, Git

- Developed a browser-based zombie survival game featuring story objectives, wave-based combat, character progression, and an endless survival mode.
- Programmed enemy AI, obstacle rerouting, and anti-clustering logic to create smoother movement and prevent zombies from overlapping.
- Built reusable systems for shooting, collision detection, enemy spawning, health, scoring, power-ups, and difficulty scaling to support multiple levels and enemy types.

SportsPro - Technical Support Web Application | [GitHub](#)

PHP, MySQL, HTML/CSS

- Built a database-driven support system that allows administrators, technicians, and customers to manage products and technical support incidents.
- Designed a relational MySQL database and implemented authentication, session management, role-based authorization, and CRUD functionality.
- Used server-side validation and prepared SQL statements to protect application data and restrict users to the appropriate system features.

SKILLS

Languages: Python, JavaScript, PHP, Java, SQL

Frameworks & Web: Streamlit, React, Next.js, Phaser 3, HTML/CSS, REST APIs, AJAX

AI & Data: RAG, LLM APIs, Sentence Transformers, semantic search, MySQL, Oracle Database, MongoDB

Tools: Git/GitHub, pytest, pypdf, Xcode, Android Studio, XAMPP
